

Reflective essay
Dakshita Pal
April 28, 2026

Throughout my academic and leadership experiences at the University of Maryland, I have had opportunities to learn a great deal about myself and what I want. I gained a better understanding of the kind of career I am going to pursue in the field of technology. My technical experience has ranged from optimizing tools during my internship to conducting cybersecurity research and building impactful projects at hackathons. Besides my technical experiences, I was involved in mentoring students and in organizations that support underrepresented groups in STEM. Through my involvement, I realized that success in technology does not come from having technical experience alone, but from having the ability to create an environment where people feel valued and empowered. Together, these experiences have shaped me into a future software engineer who values technical skill, inclusivity, and understanding.
